

SCRIPT → EDIT INSTRUCTION SHEET

“Why only 4 Value Funds gave double digit returns in 1 year?”

Reverse-engineered from the finished 2:03 vertical video · every script line mapped to the exact visual treatment used

1. What this document is

This is not a description of the finished video. It is a build sheet. Column 2 holds the script exactly as it was written; column 3 holds the instruction for what has to be on screen at that moment and how to make it.

To produce another video in the same style: write the new script in the same shape (short spoken lines separated by all-caps connector words such as BUT, SO, WHICH, FOR EXAMPLE, NOW, AND, BECAUSE), then walk down this sheet and apply the matching instruction to each line. Section 5 is the reusable rulebook — it holds true regardless of the topic.

2. Sequence setup

- Vertical 9:16, 1080 × 1920. Finished runtime 2 minutes 3 seconds.
- One continuous voice-over recorded to the script; the presenter is shot to camera in a dark studio against a blurred branded logo wall, framed with generous headroom — that empty space above the head is where every floating graphic lives.
- Music: a low bed under the whole piece, ducked well under the VO. Only one hard sound effect in the entire video (a whoosh at 0:15).
- Permanent overlays, present on every single frame: the ‘Groww shorts’ lockup top-left and the ‘Groww’ logo top-right. Full opacity over the dark talking-head layout; knocked back to roughly 35% over the light data-card layouts so they don’t compete with the card.
- Cutting rhythm: a visual change roughly every 4–5 seconds. No shot runs longer than about 7 seconds. Roughly 24 visual events across the video.

3. The three layouts — build these as templates first

LAYOUT A — Talking head, full bleed. The raw interview shot filling the frame. Used for connectors, explanation and every line that has no number in it. All floating graphics (pie, donut, clock, word stamps) are composited into the negative space above and beside the head at around 40% of frame width, semi-transparent so the backdrop reads through.

LAYOUT B — Data card, square PIP. Background swaps to a light lavender→mint vertical gradient with a faint grid. The presenter is re-cropped into a small rounded-square card at top-centre (~28% frame width). Below it sits a white rounded data card with a mint header row, thin black cell borders and a soft drop shadow. A grey source caption sits under the card.

LAYOUT C — Data card, circular PIP. Identical to Layout B, except the presenter is masked into a circle (~34% frame width). Alternate B and C from one data card to the next so consecutive data screens never look the same.

4. Asset list to prepare before you start cutting

- Interview take, vertical, dark studio, headroom left for graphics.
- Brand bug (top-left) and logo (top-right) as transparent PNGs.
- Gradient background plate with grid, for layouts B and C.
- Card template: white rounded rectangle, mint header row, black hairline cell borders, drop shadow — plus the grey source-caption style.
- Motion-graphic templates: pie, donut, bar chart, spinning wall clock, rounded phone-frame outline.
- Two metaphor b-roll clips (see rule R8) — here, a wilting plant being over-watered, and healthy plants with a snake hidden among them.
- Compliance elements: opening SEBI strip, closing RA / narrator / report-date box.

- End card / thumbnail still.
- One whoosh SFX and a soft music bed.

5. The eleven rules that govern every cut

R1 — Numbers force a card. Any script line containing a figure, a percentage or a fund name cuts away from the talking head to a data card (Layout B or C). A statistic is never left sitting on the talking head.

R2 — Tables build, they never appear. Header row first, then one row every ~0.25s, each sliding up ~20px as it fades in. Numbers count up from 0.00% to their final value over ~0.6s, and a pale proportional bar grows behind each percentage.

R3 — No card without a source. Every data card carries 'Source: ...' in grey underneath, on screen for as long as the card is. The source lines already written into the script become these captions — they are never spoken.

R4 — Emphasis words get a sans stamp. Single keywords appear in the upper third as all-caps heavy condensed white text with a small lightning-bolt glyph, typing on from the left over ~6 frames (a mint outline flashes first, then fills white), held ~1s. One at a time, only on the exact word being spoken.

R5 — Thesis lines get a serif lower third. Section-defining phrases get a two-line white serif title in the lower third, second line indented right, typed on letter by letter. Keeping this visually distinct from R4 is what stops the video feeling like one long text overlay.

R6 — The phone-frame outline announces a graphic. A white rounded-rectangle outline wiping on around the presenter is the standard tell that a floating chart is about to appear over Layout A. Use it every time, and only for that.

R7 — Floating graphics live above the head. Pie, donut and clock all sit in the empty space over the presenter, ~40% frame width, semi-transparent. Never over the face.

R8 — Concept lines get metaphor b-roll, full screen. When a line poses a problem or names an abstract idea and carries no numbers, drop the presenter entirely and play a literal visual metaphor full-frame, with props labelled in-world (a pot reading VALUE FUNDS, a watering can reading INVESTMENT). Only the logo bugs stay on top.

R9 — Cut on the connector. The all-caps connector words in the script (BUT, SO, WHICH, NOW, AND, BECAUSE, FOR EXAMPLE) are cut points. Hard cut on them; never dissolve. Two accent transitions exist: a whoosh SFX at 0:15, and a single-frame warm-orange colour flash when returning from a title card or b-roll to the talking head.

R10 — Related points swap the card, they don't cut. When two consecutive lines belong to the same argument (one fund, two pieces of evidence), hold the layout and the PIP and only swap the data card. Cut to a new layout only when the subject changes.

R11 — Compliance top and tail. SEBI registration strip for the first 1.5 seconds, RA / narrator / report-date box for the last 4 seconds, source captions on every card, and a static end card for the final second.

6. Line-by-line edit sheet

Read across: the script line on the left, the instruction for that exact moment on the right. Timecodes are from the finished video and are a guide to pacing, not a hard target.

TIMECODE	SCRIPT LINE (AS WRITTEN / SPOKEN)	WHAT MUST COME ON SCREEN — DO THIS
0:00 – 0:02	TITLE / OPEN Hey, did you know that only 4 value funds gave double digit returns in one year?	LAYOUT A — full-frame talking head. - Open cold on the presenter, no title card. Dark studio, blurred Groww logo wall behind. No music sting — voice starts on frame 1. - Place the two permanent bugs: 'Groww shorts' lockup top-left, 'Groww' logo top-right. These stay for the whole video. - COMPLIANCE: for the first 1.5 seconds only, 3 lines of 8pt white text bottom-left — SEBI registered name / SEBI Research Analyst registration number / weblink. Fade it out after 1.5s.
0:02 – 0:05	(same line continues — the number is spoken)	CUT TO LAYOUT B — data card, square PIP. - Background swaps to the light lavender-to-mint gradient plate with the faint grid. Presenter is re-cropped into a small rounded-square card at top-centre. - Build the table: header 'Fund 1-year return (%)' in mint, then drop the 4 rows in one at a time, roughly one row every 0.25s: Quant Value Fund 16.23 / LIC MF Value Fund 13.57 / DSP Value Fund 11.84 / Mahindra Manulife Value Fund 10.31. - Then fade in the footnote inside the card: 'Funds that delivered more than 10% returns. Source: Value Research. Data as of 20th July 2026.' - Caption under the card, grey: 'Source: Mint Money'. - Knock the two logo bugs back to ~35% opacity for the whole time this light layout is up.
0:05 – 0:07	BUT WHY?	CUT BACK TO LAYOUT A. - Cut exactly on the word 'BUT'. The connector words in the script are cut points — never dissolve through them. - As the question lands, wipe on the white rounded phone-frame outline around the presenter (4px stroke, rounded corners). This is the standard 'a graphic is coming' device.
0:07 – 0:11	Value Funds must hold at least 80% of their assets in equities while maintaining a documented value strategy.	FLOATING PIE CHART over Layout A. - Above the presenter's head, in the empty space, draw a pie chart at about 40% of frame width, semi-transparent so the backdrop still reads through. - Animate the indigo wedge sweeping to 80%, then pop the label with a leader line: 'Equities (80%)'. - About 1.5s later add the second label on the pale wedge: 'Other Assets (20%)'. - Hold ~2s, then dissolve the whole pie out and return to a clean talking head.

TIMECODE	SCRIPT LINE (AS WRITTEN / SPOKEN)	WHAT MUST COME ON SCREEN — DO THIS
0:11 – 0:17	SO,	LAYOUT A, clean — breathing room. - Leave 4–5 seconds with nothing on screen but the presenter. The edit needs these gaps or the graphics stop registering. - SFX at 0:15: a short whoosh on the turn into the next section. This is the only hard sound effect in the piece.
0:17 – 0:24	Value Funds focus on sectors that are currently underperforming and beaten down fundamentally solid stocks.	KINETIC WORD STAMPS over Layout A. - Three word-cards, one at a time, in the upper third — each appears on the exact word being spoken and cuts out before the next: 'FUNDAMENTALLY STRONG' (0:18) → 'UNDERPERFORMING' (0:21) → 'UNDERVALUED' (0:22). - Style: all-caps heavy condensed sans, white, with a small lightning-bolt glyph in front. Type on from the left over ~6 frames — a mint-green outline of the text flashes first, then fills solid white. Hold about 1s each. - Never stack two word-cards on screen together.
0:24 – 0:26	TO Generate returns over the long run.	LAYOUT A, clean. No graphic. Two seconds of plain talking head so the next data card hits fresh.
0:26 – 0:34	BUT As you can see from this table... the value investing style represented by Nifty 500 Value 50	CUT TO LAYOUT C — data card, circular PIP. - Same gradient plate, but this time the presenter sits in a circular mask at top-centre. Alternate square-PIP and circle-PIP from card to card so consecutive data screens don't look identical. - Card header: '(blank) 1 Year Return 5 Year Returns'. Rows drop in: Nifty 500 Value 50, Nifty 50, Nifty 500. - COUNT-UP: every number starts at 0.00% and ticks up to its final value over ~0.6s — 13.95% / 26.20%, -5.42% / 9.99%, -1.71% / 12.41%. Behind each value, grow a pale lavender (negative) or mint (positive) bar whose width is proportional to the number. - Caption: 'Source: NSE Indexogram'.
0:34 – 0:40	WHICH Consists of 50 companies based on their value score which have outperformed the Nifty 50 and Nifty 500 over 1 and 5 years... <i>Source: NSE Indexogram</i>	HOLD the same card. - Do not cut. The presenter keeps talking inside the PIP while the finished table stays up — this is the longest single hold in the video (~6s) because the line is long. - The source line written in the script is not read aloud; it becomes the grey caption under the card.
0:40 – 0:47	So, Why have many value funds not generated double digit returns over 1 year? Well, the answer may lie in sector and stock selection done by these funds...	FULL-SCREEN METAPHOR B-ROLL — presenter is off screen entirely. - Stock/AI clip: a man in a blue shirt over-watering a wilting seedling. The watering can is labelled 'Investment'; the pot is labelled 'VALUE FUNDS'. He scratches his head, looks confused, sets the can down. - Fill the frame with it. Only the two logo bugs stay on top. VO runs straight through underneath. - RULE: whenever a script line poses a problem or a 'why isn't this working' question and carries no numbers, replace the talking head with a literal visual metaphor.

TIMECODE	SCRIPT LINE (AS WRITTEN / SPOKEN)	WHAT MUST COME ON SCREEN — DO THIS
0:47 – 0:52	FOR EXAMPLE, DSP Value Fund has significant foreign holdings. <i>Source: DSP Mutual Fund Factsheet</i>	CUT TO LAYOUT B — square PIP. - Card titled 'DSP Value Fund' in the mint header. Sub-header column: 'Foreign Holdings %'. - Rows wipe in top to bottom: July 2026 13% / January 2026 23% / October 2025 26% / July 2025 26%. - Caption: 'Source: DSP Mutual Fund Factsheet'.
0:52 – 0:58	WHICH May have led to a double digit performance as US stock markets outperformed Indian stock markets over the past 1 year. <i>Source: TradingView</i>	SWAP THE CARD, keep the layout. - Don't cut away — the old card slides/fades out and the new one builds in the same slot, presenter PIP untouched. This keeps two related points feeling like one argument. - New card header: '(blank) 1 Year Return'. Rows with count-up: S&P 500 14.21% / Nifty 500 1.24% / Nasdaq 100 15.82%. - Caption: 'Source: Trading View'.
0:58 – 1:05	NOW, LIC MF Value Fund has more than 50% holdings in mid and small cap stocks. <i>Source: LIC MF Factsheet</i>	CUT TO LAYOUT C — circular PIP (switch shape, new fund). - Show the empty white card for ~0.3s first, then build it — the blank card landing before the data is part of the rhythm. - Header: 'Mcap Category Percentage'. Rows count up: Large Cap 41.56% / Mid Cap 18.37% / Small Cap 35.86% / Total Equity 95.79%, each with a lavender proportional bar behind the number. - Caption: 'Source: LIC MF Factsheet'. - NOTE: the script says 'more than 50% in mid and small cap' — the graphic must let the viewer add 18.37 + 35.86 themselves. Show the supporting numbers, not the claim.
1:05 – 1:12	AND As the mid and small cap segment has done well recently this fund may have generated double digit returns... <i>Source: Moneycontrol</i>	SWAP THE CARD, keep circular PIP. - Header: '(blank) 6 Months'. Two rows, count-up: Nifty Small Cap 100 Index 13.40% / Nifty Mid Cap 150 Index 7.10%. - Caption: 'Source: Moneycontrol'.
1:12 – 1:16	The strong performance of the Quant Value Fund over 1-year generally comes down to its non-traditional approach to value investing...	CUT BACK TO LAYOUT A, clean. About 4 seconds of plain talking head to reset before the third fund's block of graphics.
1:16 – 1:19	(same line — the phrase 'non-traditional' is the beat)	LOWER-THIRD SERIF TITLE. - Type on, letter by letter, bottom-left: 'Non traditional' on line 1 (large), 'Value investing' on line 2 (smaller, indented to the right). High-contrast white serif — deliberately different from the all-caps sans word-stamps used earlier. - RULE: all-caps sans stamps = single emphasis words. Serif two-line lower third = the thesis or section heading of a block. - Exit with a 1-frame warm-orange colour flash at 1:18 as the transition out.

TIMECODE	SCRIPT LINE (AS WRITTEN / SPOKEN)	WHAT MUST COME ON SCREEN — DO THIS
1:19 – 1:22	WHICH IS Proprietary VLRT Framework. <i>Source: Quant Mutual Fund</i>	CUT TO LAYOUT C — circular PIP, diagram card. - White card containing a cross/axis diagram, mint axis lines, big indigo letters V-L-R-T at the four arms: VALUATION (top) 'Knowing the difference between price and value.' / RISK APPETITE (left) 'Perceiving what drives market participants to certain actions and reactions.' / TIME (right) 'Being in sync with the waves of value and behaviour.' / LIQUIDITY (bottom) 'Understanding the flow of money across asset classes.' - Caption: 'Source: Quant Mutual Fund'. - When the script names a proprietary framework, rebuild it as a diagram card — do not screenshot the fund house's own artwork.
1:22 – 1:25	ALSO This fund has higher allocation towards mid and small cap stocks. <i>Quant Value Fund</i> <i>Source: Quant Mutual Fund</i>	LAYOUT B — square PIP, BAR CHART card. - Title inside the card: 'CONTRIBUTION BY MARKET CAP'. Y-axis 0% to 44% with gridline labels 0 / 9 / 18 / 26 / 35 / 44. - Three bars grow up from zero over ~0.8s with a teal-to-indigo vertical gradient: Large Cap 37.59% / Mid Cap 19.41% / Small Cap 27.12%. Value label pops above each bar as it finishes. - Caption: 'Source: Quant Mutual Fund'.
1:25 – 1:29	Do note that one must not judge the performance of value funds based solely on 1 year performance... <i>Source: Value Research</i>	SWAP THE CARD — same square PIP layout. - Header: '(blank) 3 Year Return 5 Year Return 10 Year Returns'. Rows build: Quant Value Fund 22.52% / – / – ; LIC MF Value Fund 17.48% / – / – ; DSP Value Fund 17.33% / 13.92% / –. - Leave the em-dashes visible. The empty cells ARE the point — they show these funds have no long track record. - Caption: 'Source: Value Research'.
1:29 – 1:34	BECAUSE The value investing strategy takes time to generate a good performance...	CUT TO LAYOUT A + FLOATING CLOCK. - At ~1:31 scale in a wall-clock graphic above the presenter's head: mint ring, white face, black hands, red second hand. - Spin the hands fast (several hours per second) for about 2.5s on the word 'time', then pop the clock out. - RULE: abstract time/waiting language gets a literal object animation, not text.
1:34 – 1:41	Although all value funds follow the same objective of investing in undervalued stocks, they can be very different from one another. There is no fixed definition of what a value stock is, so each fund manager may follow a different approach.	LAYOUT A, clean. - Longest graphic-free stretch in the video (~7s). This is intentional — the line is dense, so let the viewer listen. - At 1:41, wipe on the rounded phone-frame outline again to signal the last graphic.

TIMECODE	SCRIPT LINE (AS WRITTEN / SPOKEN)	WHAT MUST COME ON SCREEN — DO THIS
1:41 – 1:48	Some value funds may invest more in large-cap stocks, while others may have a higher allocation to mid-cap, small-cap, or even international stocks.	MORPHING DONUT CHART over Layout A. - Title 'Fund Composition' above the presenter's head, with a donut chart and leader-line labels for Large-Cap (mint) / Mid-Cap (indigo) / Small-Cap (blue) / International (grey). - The donut re-animates four times, roughly once per second, one 'kind of fund' per beat of the sentence: 37/21/21/21 → 70/10/10/10 → 47/22/21/15 → 20/35/25/20. Segments and % labels tween between states, they don't cut. - RULE: when the script says 'some do X, others do Y', animate ONE chart through several states rather than cutting between several charts.
1:48 – 1:54	What matters most is not just the returns, but also the level of risk the fund takes to generate those returns.	FULL-SCREEN METAPHOR B-ROLL #2 + serif title. - Stock/AI clip: four healthy seedlings in dark-blue pots all labelled 'VALUE FUNDS', lined up on a kitchen counter — with a green snake coiled through them. Slow push-in. - Type on the serif title bottom-left, letter by letter: 'How much' line 1, 'risk?' line 2 indented right. Same style as the 'Non traditional' title. - Exit at 1:54 with the 1-frame warm-orange colour flash back to Layout A.
1:54 – 1:59	Compare the fund's risk and risk-adjusted performance, and make sure it matches your own risk appetite and investment goals.	LAYOUT A, clean. No graphics on the advice line — the presenter delivers it straight to camera.
1:59 – 2:02	Choose your value fund wisely — not just the one with the highest past returns.	LAYOUT A + COMPLIANCE BOX. - Type on a thin white rectangle outline in the lower third with mint text inside, one line at a time: 'Name of RA: Cleyon Savio Dsouza' / 'Name of narrator: <name>' / 'Report date: <DD Month, YYYY>' / "RA disclaimer link in channel 'About' section". - Hold it to the last frame of the talking head. This box is mandatory — swap only the names and the date.
2:02 – 2:03	(no VO — end card)	STATIC END CARD, ~1 second. - Cut to the thumbnail frame: light background, Groww logo at top, then '4 Value Funds' in indigo italic serif / 'THAT GAVE' in black caps / 'DOUBLE-DIGIT RETURNS!' in white caps on an indigo block. - Presenter cut-out in a green blazer holding up four fingers, rupee money bags and a rising green chart behind her. - Freeze, no animation. Music tail ends here.

7. Template for the next video

The finished video runs to a fixed skeleton. Write the new script into these slots and the edit above transfers unchanged.

1. **HOOK (0:00–0:05)** — talking head cold open on the surprising number, then immediately cut to the ranked table that proves it. SEBI strip over the first 1.5s.
2. **DEFINITION (0:05–0:15)** — ‘BUT WHY?’ back to talking head; phone-frame outline; one floating pie showing the defining rule of the product.
3. **MECHANISM (0:15–0:26)** — whoosh, then three kinetic keyword stamps on the words that define how the product works, then a clean beat.
4. **BENCHMARK (0:26–0:40)** — one data card, held long, showing the index or category actually performed well. This sets up the contradiction.
5. **THE PROBLEM (0:40–0:47)** — full-screen metaphor b-roll while the VO asks why the individual products then failed.
6. **EVIDENCE BLOCKS (0:47–1:29)** — one block per example, each two or three data cards long: state the distinguishing feature, then swap the card to the market data that explains it. Alternate square and circular PIP between blocks.
7. **CAVEAT (1:29–1:41)** — talking head with a single object animation (the clock) on the word that carries the idea, then the longest graphic-free stretch of the video for the dense nuance line.
8. **VARIATION (1:41–1:48)** — one chart animating through several states to show ‘some do this, others do that’.
9. **THE REAL POINT (1:48–1:54)** — second metaphor b-roll with a serif lower-third title asking the question the viewer should actually be asking.
10. **ADVICE + COMPLIANCE (1:54–2:02)** — clean talking head for the takeaway; RA / narrator / report-date box types on over the last few seconds.
11. **END CARD (2:02–2:03)** — one second on the static thumbnail.

Quick QC before export: every number on screen appears in the script and vice versa; every card has a source; no two consecutive data cards share the same PIP shape; no shot exceeds ~7 seconds; the SEBI strip and RA box are both present; the end card is the last frame.
